

FL 100 PulseFlush Machine

SPEL (Specialised Engineering and Logistics) is the New Zealand Defence Force (Army) Base Repair and Maintenance supplier. SPEL operates out of the NZDF Base Repair Depot at Trentham and also from the 1st Battalion BRD at Linton.

We are a TAPPS dealer for CAT, and Waterous Company. We are an authorised repair franchise for Mercedes, Stuart & Stevenson, MAN, Volvo, Iveco, Scania, Isuzu, Hino, Mack, Pinzgauer, and Mitsubishi.

Our range of clients include the NZ Defence Force (Army, Navy & Air Force), NZ Fire Service, NZ Police, Department of Corrections, Accident Compensation Corporation, NZ Customs, ALSCO, Order of St John, and other Government Agencies.

Our maintenance facilities services anything from major vehicles to generators, compressors and pumps. Vehicles range from one tonne utility trucks to 42 tonne construction trucks and from Pinzgauer Light Operational Vehicles (LOV) to Light Armoured Vehicles (General Dynamics LAV 3), from radar to satellites and radios to rockets.

SPEL constantly seeks to improve services to our clients and using the PCS Pulse Flush Technology with the NZ Army and with other clients has proved beyond doubt the importance of power flushing engines and having good clean cooling systems.

SPEL use the PCS Pulse Flushing Machine in both operational military vehicles and in vehicles prior to being put into "deep storage".

The main advantages to our clients is shorter service downtime, improved life expectancy of the units, more cost effective servicing and increased reliability of the engines.

It is also very evident that when an item is re-introduced into service after 'deep storage' that its condition has in no way deteriorated. It is far easier to re-introduce equipment with minimum preparation time, due to pre-deep storage cooling system Pulse Flushing.

With the introduction of the PCS Pulse Flush Machines and trained staff, SPEL has the technology to service our customers equipment to ISO 9001:2000 standards.
